Growth project at Kiltarlity WwTW

Replacement Aerator

Aeration is an existing part of the biological treatment process at Kiltarlity. Air is forced into sewage to create biological floc which results in the aerobic digestion of organic materials. The existing aerators require to be replaced with the latest technology.

New Power and Control System

The newly installed equipment will require a new power connection which will include a power cable diversion which will be carried out by Scottish & Southern Electricity Networks.

The new equipment will also be controlled from a new control system which will be installed in a new kiosk within the WWTW boundary.

Planning and Licensing

Full planning permission will be submitted for the Growth project in October 2022.

Programme

Subject to planning consent, work is expected to start in Autumn 2023 and last for approximately 18 months. Enabling works will be carried out in advance, which will include surveys, improvements to the access track and burying a section of powerline.
